

## CONTEXT

River and its ecosystems play a vital role in human development. However, due to rapid urbanization and factors like changing climatic conditions, the riverine ecosystems are altering, especially within urban influence.

Consequently, there is a new discourse, towards managing urban rivers, which includes environmental, economic and social aspects. It is envisaged that academia has a vital role to play in this new discourse, by incorporating such aspects in their research, academic programs, pedagogy, etc. Therefore, NIUA and NMCG in collaboration with Department of Architecture and Regional Planning, IIT Kharagpur is organizing a dedicated 2-day residential training programme that will focus on the holistic understanding of river sensitive urban development.

Environmental

Social

Economic

### Elements of Holistic River Management

## LINK TO APPLY

Your application should include CV and a letter of interest expressing how the training will benefit you.
